

“The Finished Surface - Dense, Durable and Joint Free”

Privica Pavements surfaces are delivered as standard with a light rough structure, made by pulling off the surface with a rubber squeegee. Surfaces can be coloured by adding pigments to the grouts - being inherent the colour doesn't wear out.

Vinyl sheet can be bonded directly, without joints.

All surface finishes (vinyl, carpet, epoxy...) can be applied without any further treatment after 72 hours (at 20°C) due to the fast strength development and low water / cement ratio of the Privica mortar.

The surface can be ground and polished to give a terrazzo type look, the cost will vary according to your selection of aggregates.

Sprinkled toppings such as hard sands and bauxites are applied without the need for epoxy bonding.

Nanotechnology can be applied to improve the stain resistance to a level greater than that of concrete.

Standard Finish

Coloured

Sand / Bauxite

Shot Blasted

Ground

Ground & Polished
“Terazzo”

Bonded

Epoxy Paint

Surface Slip Resistance (SRT)	
Standard	55
Ground	70
Shot Blasted	80
Bauxite	95

Abrasion Resistance	Freeze-Thaw Resistance
(Standard Finish)	
(DIN52108)	(SS137244)
“Dust Free”	“Very Good”
5-7cm ³ /50cm ² (Bohme)
